

Dear VigiFlow user,

VigiFlow is updated with some new features.

Data entry - duplication of sections

1. Some sections/subsections can now be **duplicated** with the entered data intact. This means that a new section/subsection is added with the data from the first section/subsection copied into it. The below icons indicate where duplication is possible:

From this release this duplication can be done for:

- Drug section
 - Reaction section
 - Tests and procedures
2. The (+) icon for **adding new empty sections** has been moved to the *right side* throughout the interface, in order to be placed together with the duplication icon:

Previous:

Current:

Adds new
empty section

Adds new section with
all entered data copied
