Dear VigiFlow user,

VigiFlow is updated with some new features which we hope you will find useful. A summary of the changes is provided below.

1) Report list

The filter '*Means of reporting*' has been updated with the new option *eReporting – Vaccine*. This is in preparation for the upcoming launch of the new add-on Vaccine eReporting. If Vaccine eReporting will be used, the filter will show reports coming from this reporting pathway.

2) AEFI data entry form

- **Section 'Identification'**
  New fields added:
  - Report type
  - Initial received date
  - Latest received date

> *Please note that the 'Initial received date' is different from the other date fields in the AEFI form. Below is a short description of the available dates in the AEFI form, for clarity:*
>
> - *'Date patient notified event to health system':*
>   *The date the patient notified the health care system of the event, for example told a health care worker. Normally used for monitoring surveillance performance within the Immunisation Programme.*
> - *'Date of report':*
>   *Date when the actual report was compiled by the reporter (on e.g. a paper form). Normally used for monitoring surveillance performance within the Immunisation Programme.*
> - *'Initial received date':*
>   *The date the report was first received by any level within the National PV Centre (i.e. also considering settings where sub-organisation(s) enter reports in VigiFlow). This is the date you may use to filter your reports in the Report List.*
> - *'Latest received date':*
>   *The date the latest information (i.e. follow-up information) was received by any level within the National PV Centre. When only initial information exists the '**Latest received date**' equals the '**Initial received date**'*
